EXAMINER'S AMENDMENT

Acknowledgment is made of the amendment filed on February 20, 2007. Claims 1 and 23-50 are currently pending.

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Catherine Voisenet on April 2, 2007.

The application has been amended as follows:

IN THE CLAIMS:

delete claims 45-50

Allowable Subject Matter

2. Claims 1 and 23-44 are allowable over prior art.
3. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to teach or fairly suggest either alone or in combination thereof,

Art Unit: 2876

regarding claim 1, a product having a surface with a position coding pattern, the position coding pattern coding positions on the surface so that it is suitable for electronic recording of handwriting, the position coding pattern comprising a plurality of marks, each of which represents one of at least two different values;

regarding claim 34, a method of electronically recording handwriting comprising:

capturing a sequence of images of a position-coding pattern on a surface while handwriting is created on the surface, each image including a subset of the position-coding pattern and each subset including an array of marks coding a position on the surface,

determining a plurality of nominal positions in each of the images; and

determining locations of the marks in relation to the nominal positions in each of the images; and

regarding claim 39, a device for electronically recording handwriting, comprising:

a sensor for capturing a sequence of images of a position-coded pattern on a surface while the sensor is moved over the surface, each image including a subset of the position-coding pattern including an array of marks, and

a processor, which is configured to determine a plurality of nominal positions in each of the images, to determine locations of the marks in relation to the nominal positions in each of the images, and to determine a position coded by the array of marks in each image based on the locations of at least some of the marks in relation to the respective nominal positions of the marks.
